

It Is A Data-Driven World

Everything we do generates data. However, many industries lack the tools necessary to empower the data to drive improvements, results and outcomes. How can that data be truly useful?

At SRG Technology, we use innovative ideas and cutting-edge technology to harness data and information that moves people and organizations forward.

SRG Technology's solutions create opportunities for collaboration and communication. Our solutions unify silos of data and provide meaningful, individualized recommendations to drive targeted improvements. Our solutions empower data to ignite action — inspiring better practices, better results and continuous improvement.

Promoting Effectiveness and Personalizing Teaching and Learning

- BlenderLearn™ is an ecosystem of innovative applications designed to drive student, teacher and school improvements by tracking effectiveness and progress while facilitating and promoting personalized learning.
- The BlenderLearn™ Instructional Content Management System, Assessment Data Management System and Learning Management System provide the core technology needed by every school.
- The BlenderLearn™ Individual Learner Profiles, Early Warning System and Performance Dashboards are the cutting-edge technology systems that perfectly define the future of educational technology.

Making Population Health Manageable

- TopCare revolutionizes the way providers use data to develop care plans, identify gaps in care, foster care team collaboration and initiate interventions.
- TopCare's enhanced data collection allows users to effectively manage populations by using multiple data sources, providing a unique patient-centric view.
- TopCare provides the technology bridge from volume to value by enabling a continuous cycle of improvement, promoting work flow efficiency and patient wellness.

Connect. Engage. Improve.

- BlenderConnect™ is a web-based engagement solution designed to connect people with resources, content and support, based on user-identified information.
- BlenderConnect™ employs a content management system, collaborative work spaces, forums, and a rewards and incentive package to encourage use and cultivate an individually-relevant experience to engage, alert, assist, inform, and educate target audiences.

Informed Decisions. Better Outcomes.

- BlenderRM™ is a global, geo-positional Risk Management solution that collects vast amounts of data; analyzes it; filters and organizes it into meaningful, timely and relevant alerts and information to better align, avoid and manage risks.
- BlenderRM™ mines, tracks and monitors data for the following risks: weather; travel; road and navigation hazards; medical epidemics and emergencies; civil unrest; and port and terminal information.
- BlenderRM™ not only saves users time by eliminating the need to determine the relevancy of excessive data from diverse sources, but more importantly, prioritizes the most relevant information based on their geo-location and routing.
